

CombiMaster

ENVIRONMENTALLY FRIENDLY CONCEPT

CombiPac®

The CombiPac® concept is a unique thermoforming technology that matches market demands for environmentally friendly packaging by saving up to 60% plastic.

CombiPac® offers great versatility by combining unique barrier properties with an exclusive look. We offer customized solutions e.g. upside down application.

CombiRound® The CombiRound® concept combines the best properties of cardboard and plastic and as an option, we also offer a 100% peelable cup.

CombiRound® is a lightweight packaging and very environmentally friendly. The product minimizes the usage of raw materials from fossil elements.

The pot is suitable for all kind of foods such as yogurt, desserts, snacks, sweets etc. Pots are also available with transparent foil and windows.

PRODUCT

PRODUCT DESCRIPTION

CombiRound®

CombiRound® comes in standard sizes Ø75 and Ø95 in various heights.

Only 2,2 g plastic

Lid types

We offer lids for all our different shapes both in clear or colored foil. We also offer on the go lid with visible separation of food and add-ons such as spoon, fork – or even your campaign. Use the food compartment for cereal, honey, jam etc.

On the go lid is available in Ø75 and Ø95.

Lid decoration

Preprinted

This method of decoration involves printing the design via roto gravure onto the foil before it is shaped into a lid. It offers a unique opportunity to achieve photographic quality and to print over the edge of the lid.

Dry offset printing

This printing technique, which is used for decoration, involves six-colour printing directly on the lid, offering cost-effective and attractive decoration.

Carton inserts

Here the design is printed onto a card which is then applied to the lid. This method fully utilises the lid's design surface, and decoration of a very high quality can be achieved. The lid also acquires considerable stiffness, giving a subjective experience of quality and strength.

Label

Labels can be produced in countless variations, and even as small "booklets", making it possible to run campaigns and produce photographic print quality.

Who we are

At Promens Stilling A/S we are dedicated experts in combining cardboard and plastic for Food Packaging.

The key to this kind of packaging is a minimal percentage of plastic combined with cardboard into an all in one package

Documented quality system, confirmed by highest level of BRC IoP and ISO 9001 ensures highest focus on quality even beyond the product level.

Promens Stilling A/S is part of the Food Packaging division that offers a wide range of standard packaging as well as customised solutions in various technologies & decorations, i.e.:

- IML
- Sleeved
- Dry-Offset Printing
- Thermoformed CombiPac® / CombiRound®
- Pre-printed lids (auto-gravure)
- Extrusion Blow Moulding

The committed Promens team converts solid packaging know-how together with you and your ideas into attractive concepts.

Challenge us with your needs!
